Number	Tested:	Input	Expected Output
1	Habit Creation UI interfacing	Clicking New Habit	New Habit Window opens and the habit is saved successfully to the database and appear at the top of the list
2	Editing Habit UI and interfacing	Clicking on edit Habit and changing a value	The Updated Habit should be saved to the DB and update in the list
3	Log Increment and then once TargetValue is reached allow user to complete habit	Clicking on log Increment and inputting a value.Cumalative entered values >= TargetVAlue	Once the cumulative value is high enough the Log Completion form should open and allow the user to input a note.
4	Archiving and Activating	Clicking on Archive will move the Habit to the Archive screen. And clicking on Unarchive will move the habit back to the Active Screen	When Archive habit is pressed the Habit should move to and from the Archive screen without throwing errors

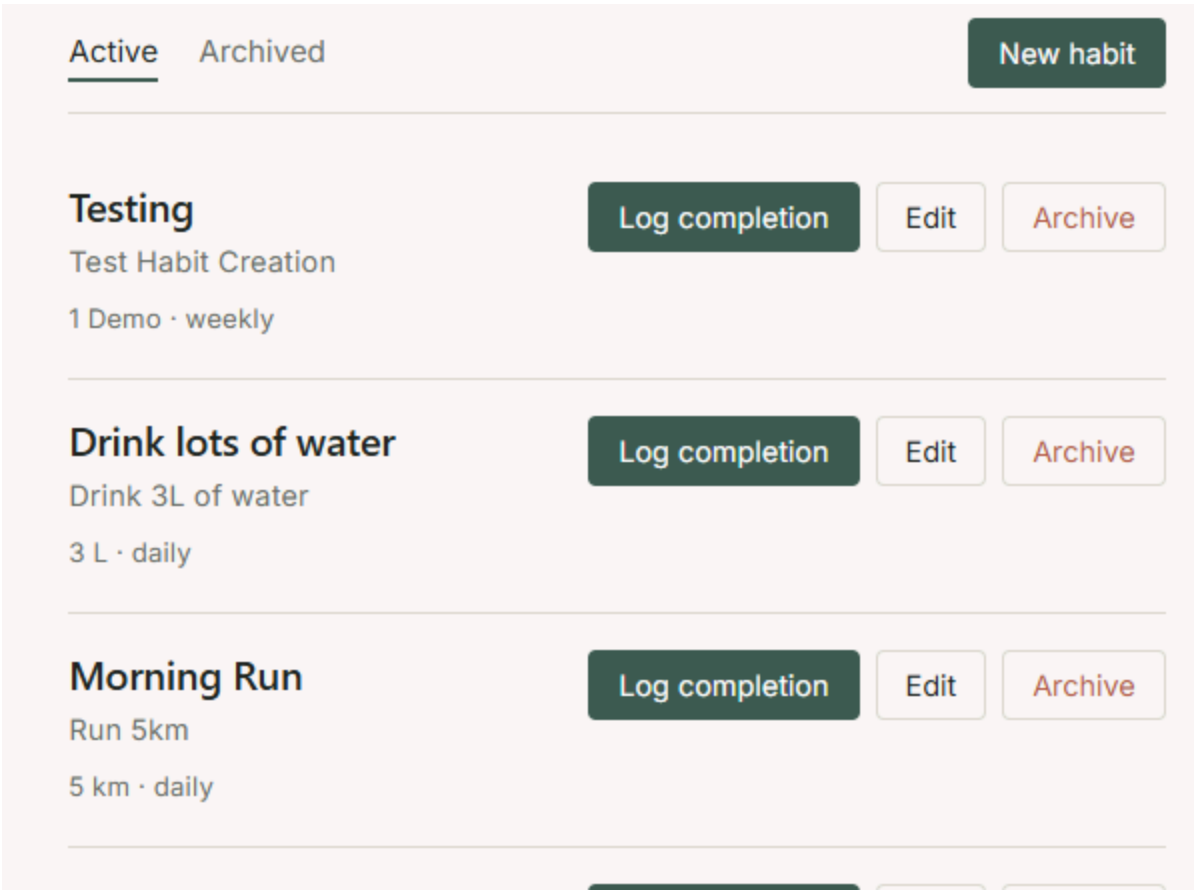

1. Habit Creation:
   The New Habit Ui button can be found in the top right corner

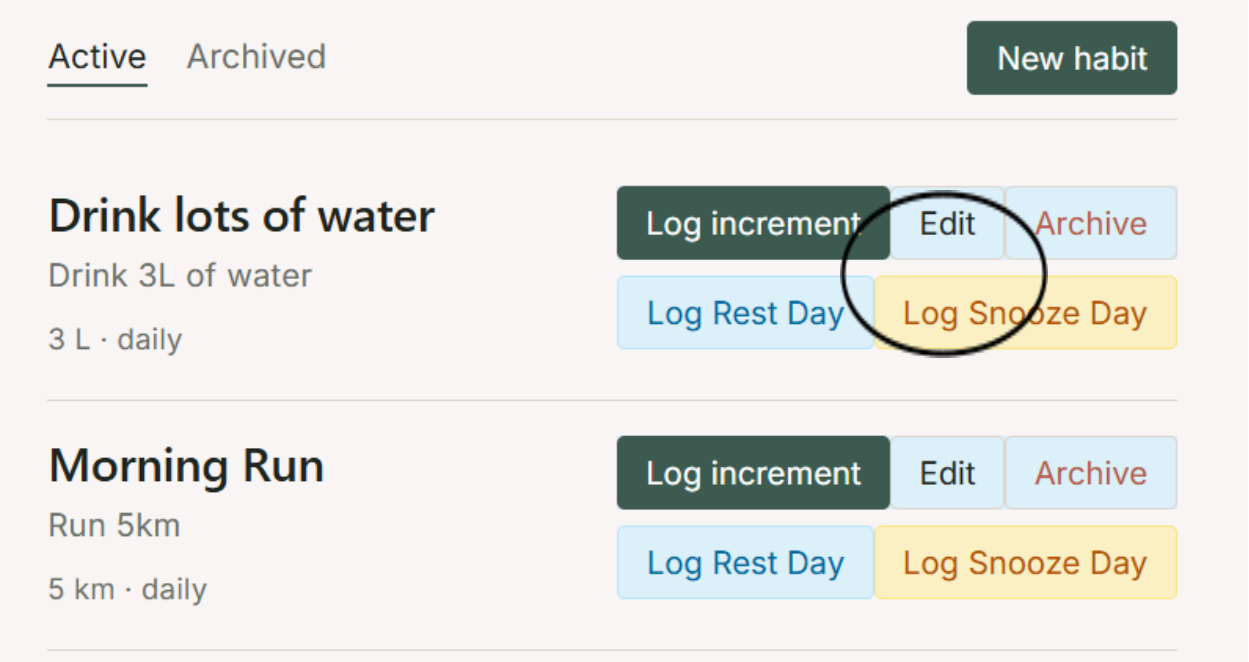

Once the button is pressed this window pops up

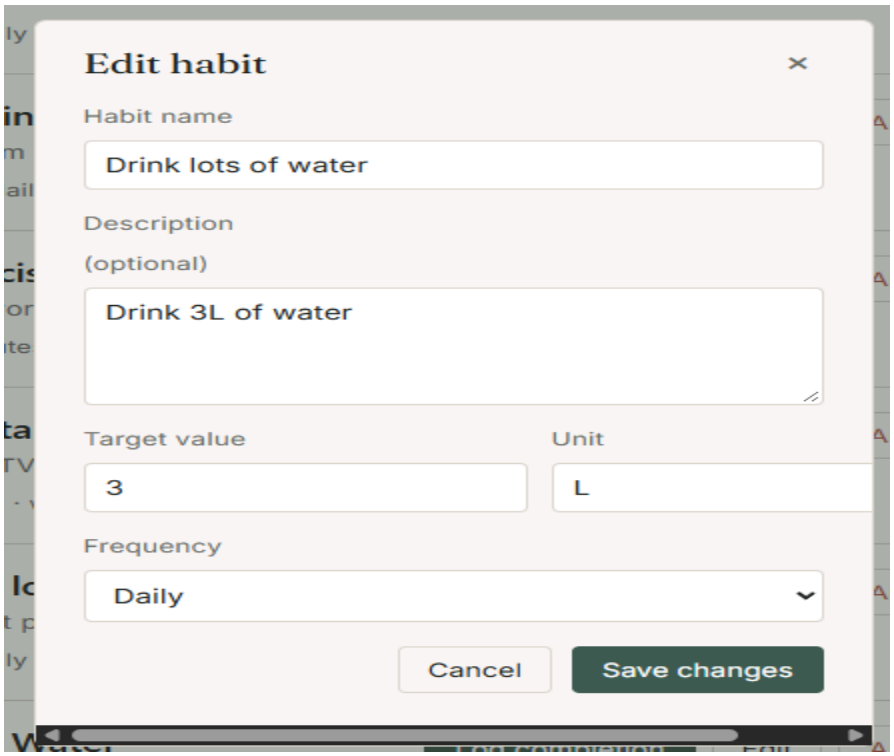

This window includes toggles for frequency and input for The TargetValue, TargetUnit, Name and Description. Once Create Habit is clicked a new Habit is created and it appears at the top of the list

2. Editing Habit: This button is found in the middle of the top row of the habit on the right side:

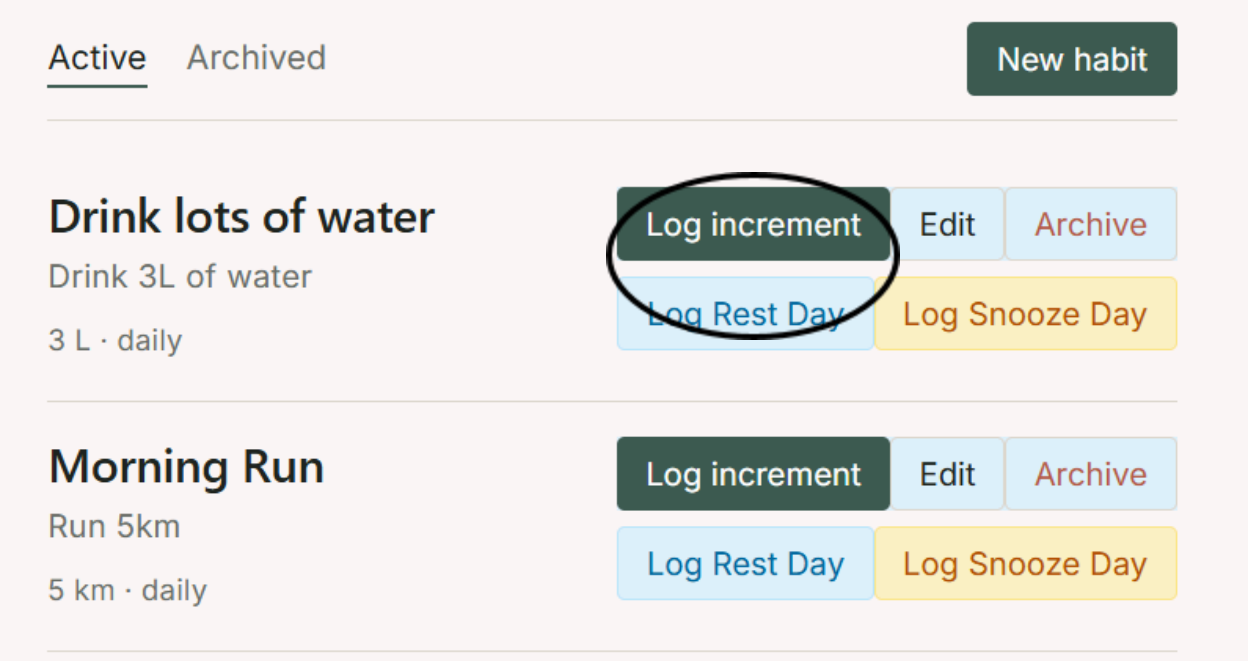

Pressing the edit button pops up another window that allows the user to edit their Habit (name, description, TargetValue, TargetUnit and Frequency) allowing flexible habit management.

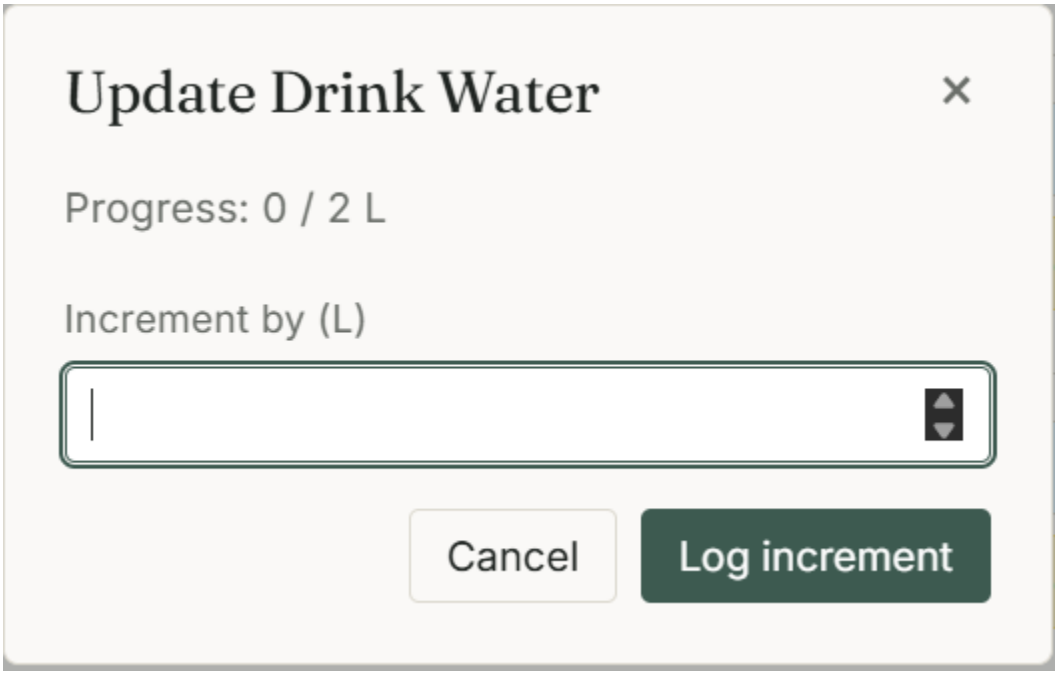

Once Save Changes is clicked the Habit is updated and saved to the Database

3. Log Increment: This allows the user to Increment the value of the Habit

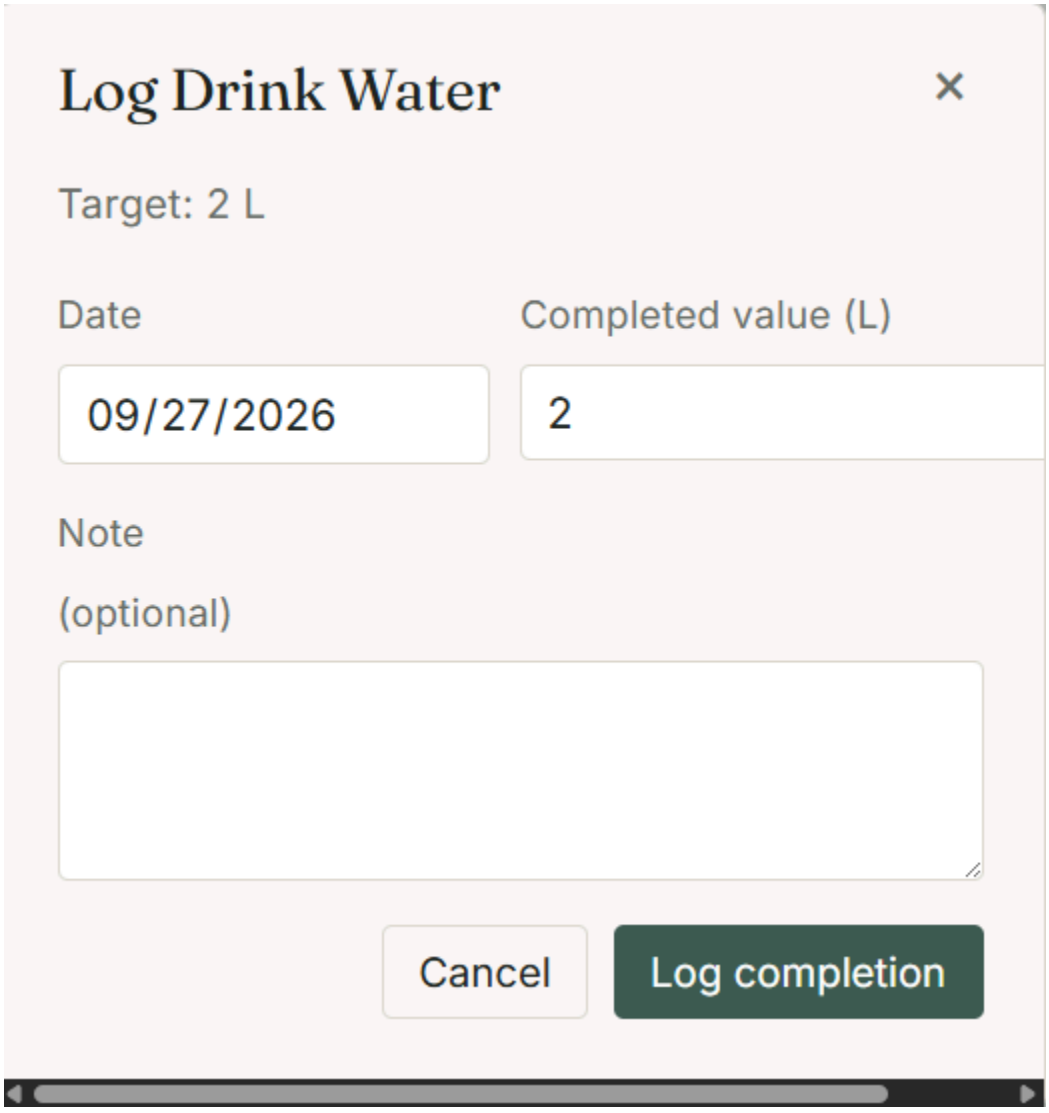

When the Log Increment button is pressed this window pops up:

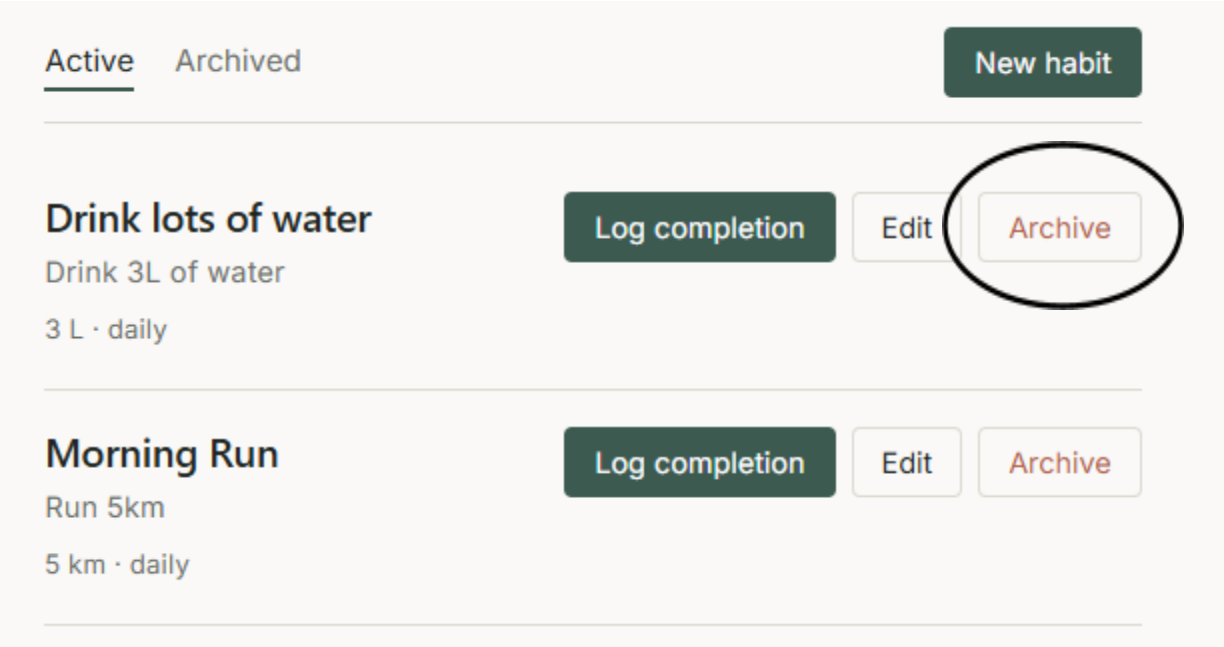

This allows the user to input a value that is not necessarily >= targetValue so that the habits value can be incremented throughout the day

If the value is not high enough a warning is given to the user reminding them again of the required TargetValue and its corresponding unit needed to log the habit as completed

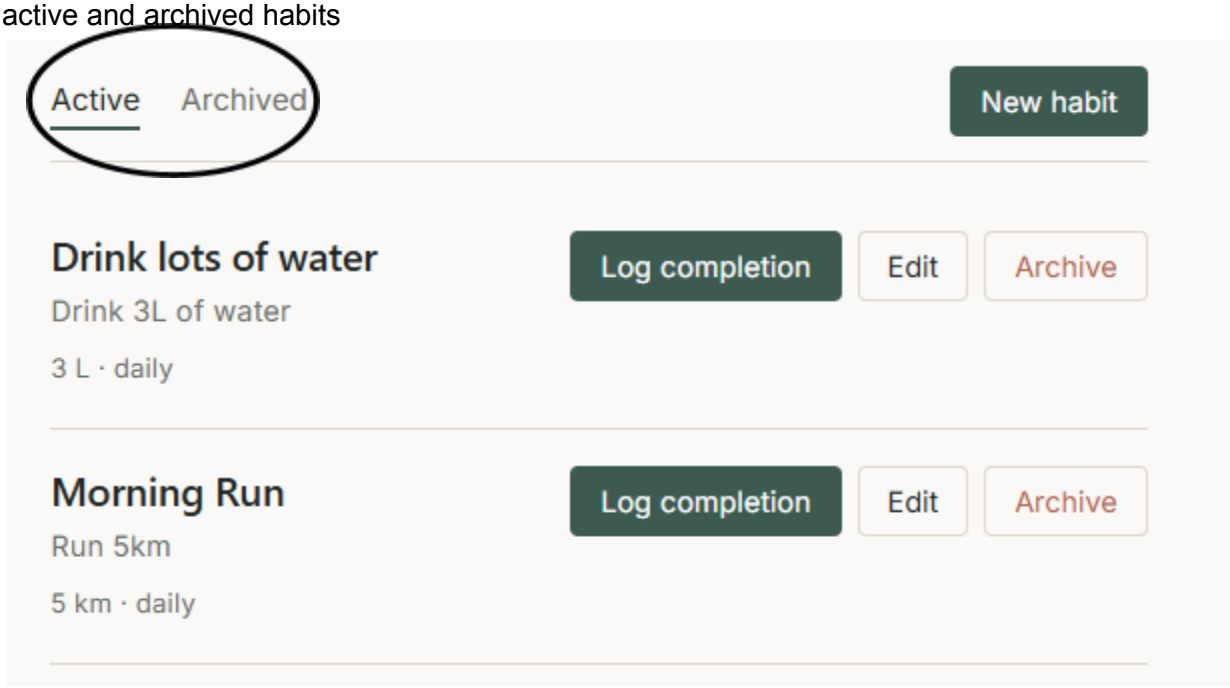

Once the user has incremented enough that the value is gte the the target value a Log Completion modal opens allowing the user to add a note to the habit before the habit is completed

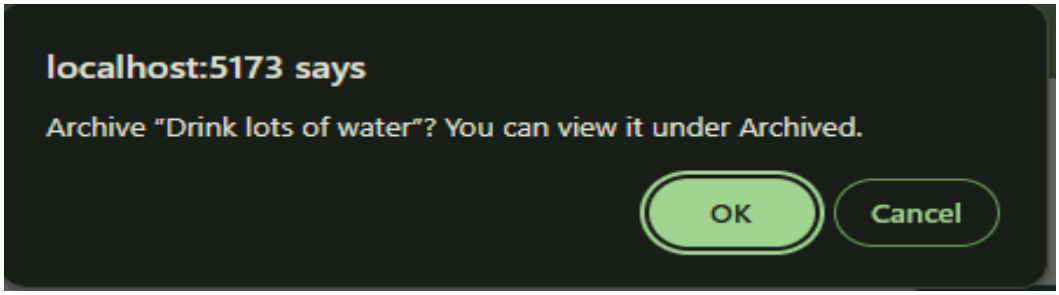

4. Archiving and Activating: This allows the user to archive old habits for later use and clear their dashboard

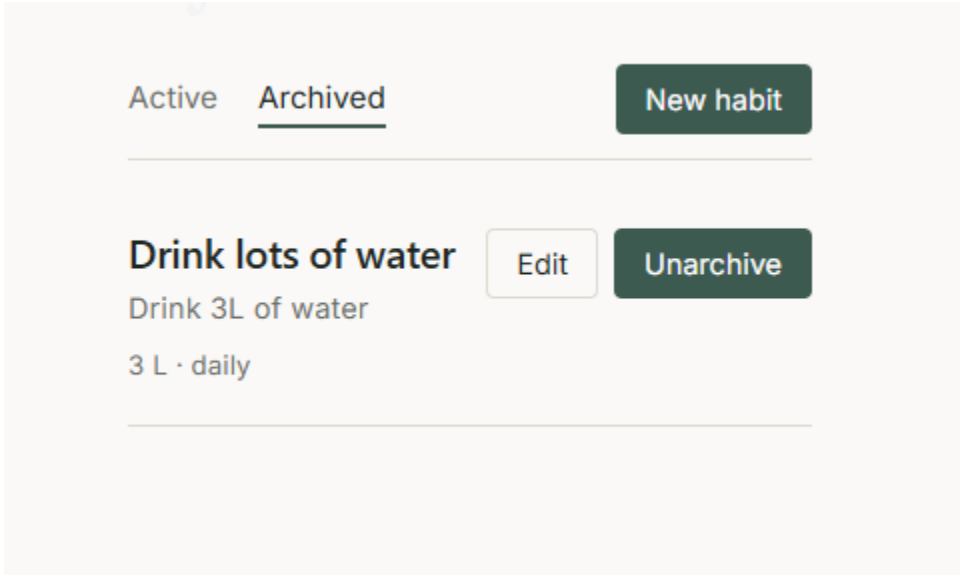

The dashboard has two toggles at the top that allow the user to switch between their active and archived habits

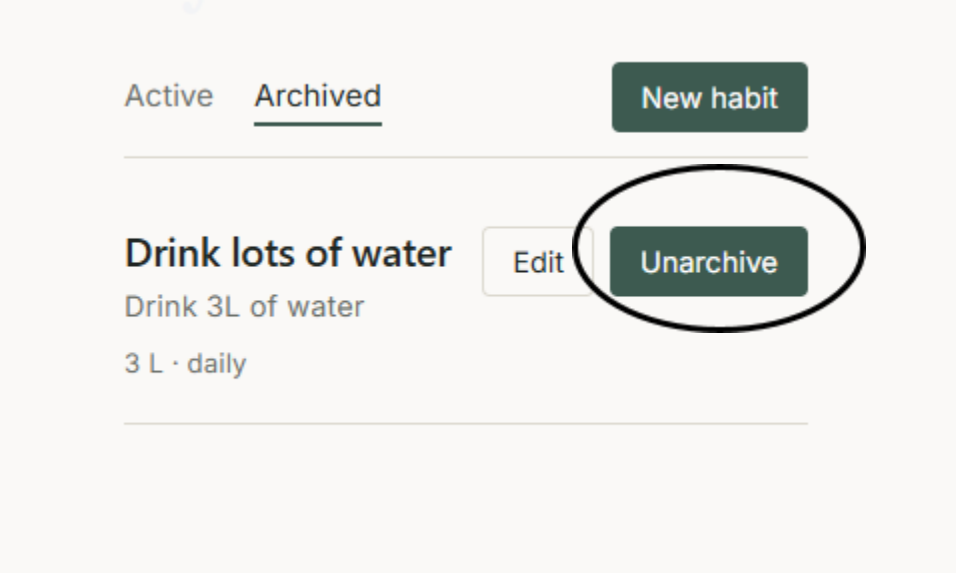

When the user tries to archive their habit they are met with a confirmation prompt:

Once the Habit has been archived it can be found in the archived section while there it can still be edited to suit the users needs:

If the user decides they would like to activate an archived habit then they press the unarchive button:

Once the habit has been activated it can be found in the active section:
